

Hello from Sanipac!

As you may have heard, there has been recent volatility in the worldwide recycling markets related to the levels of contamination in recycling. As a response to this, the best thing we can all do is make sure our recycling is as clean as possible. Please see below for a list of the most common items contaminating recycling, as well as a list of acceptable items on the back page.

Thanks so much for continuing to keep our area a leader in recycling!

**The items listed below contaminate curbside recycling.
Please keep them out of the can.**

NO	Problem	Reason	Solution
	Plastic bags and film	Bags and film jam equipment at the sorting facility and create slow downs in processing. Removing the film from the processing equipment is difficult and dangerous.	Plastic grocery bags are accepted for recycling at many local grocery stores. (Or dispose of as trash.)
	Plastic clamshells	There is no current market for this material. Processors receiving a high level of these contaminants can potentially reject entire loads of recycling.	Dispose of as trash.
	Food residue	Food residue can cause the processor to reject materials. Food residue can also leak onto and contaminate other materials in the recycling stream.	Always rinse and clean out food residue before recycling.
	Styrofoam	Unwanted by processors. Breaks up into small pieces and contaminates other recycling.	St. Vincent De Paul also has a styrofoam recycling program. For more information visit: www.svdp.us . (Or dispose of as trash.)
	Napkins and paper towels	Unwanted by processors. Can contain food/liquid which contaminates other recyclables.	Napkins and paper towels can also act as a good source of carbon for backyard compost piles. (Or dispose of as trash.)

Doing good in our community, keeping our area a leader in recycling!
